

Contents

Chapter 1: introduction	1
1.1 Introduction	2
1.2 Preconditions for axial chirality and mechanism of atropisomerization The phenomenon of axial chirality	5
1.3 Atropisomerization by physical rotation	7
1.3.1 Effects of nonbonding substituents	7
1.3.2 Bridged biaryl systems	9
1.4 Diphosphine ligand	10
1.4.1 BINAP in asymmetric catalysis	10
Chapter 2: 2-(2-Hydroxyaryl)cinnamic amides: a new class of axially chiral molecules	20
2.1 Non-biaryl classes of atropisomeric molecules	21
2.2 2-(2-Hydroxyaryl)cinnamic amides: a new class of axially chiral molecules	25
2.3 Results and discussion	25
2.4 Barriers to rotation	31
2.5 Conclusions	37
2.6 Experimental section	38
Chapter 3: Monodentate Phosphorus Ligands	52
3.1 Homogeneous catalysis using transition metal complexes	53
3.2 Monodentate phosphines	56
3.3 Monodentate phosphonites	58

3.4	Monodentate phosphites	59
3.5	Monodentate phosphoramidites	61
3.6	The monodentate ligand combination approach	63
3.7	<i>Tropos</i> monodentate phosphites and phosphoramidites	65
3.8	Experimental section	74
Chapter 4: Catalytic, Enantioselective Preparation of Diarylmethanols		95
4.1	Introduction	96
4.2	Biologically active diarylmethanols derivatives	97
4.3	Catalytic enantioselective preparation of diarylmethanols Nucleophilic addition of organometallic compounds to aldehydes	98
4.3.1	Phenyl transfer reactions to aromatic aldehydes using diphenylzinc as aryl source	98
4.3.2	Other aryl sources in the aryl transfer reactions to aldehydes	106
4.3.3	Rh-, Ti-, and Cu-catalysed enantioselective aryl transfer reactions	114
4.4	Rhodium-catalysed addition of arylboronic acids to aldehydes	117
4.5	Experimental section	126
Chapter 5: Asymmetric Aryl Transfer to Imines: Synthesis of Diarylmethylamines		129
5.1	Introduction	130
5.2	Enantioselective rhodium-catalysed addition of arylboronic acids to <i>N</i> -tosylarylimines	138
5.3	Experimental section	145
Summary		153
